Given a string, find the length of the **longest substring** without repeating characters.

Examples:

Given `"abcabcbb"` , the answer is `"abc"` , which the length is 3.

Given `"bbbbb"` , the answer is `"b"` , with the length of 1.

Given `"pwwkew"` , the answer is `"wke"` , with the length of 3. Note that the answer must be a **substring**, `"pwke"` is a *subsequence* and not a substring.
